
2. Using the set-ipv4-method script:
   #zypper in connman-test
   # if not already installed
   /usr/lib/connman/test/set-ipv4-method
   _service_ manual _ip address_. I try and set the gateway several ways:
   (root server ~)# nmcli con mod eno16777736 ipv4.method manual ipv4.addresses 192.168.115.133/24, 192.168.115.2. e

Manual, Top Contents Help Glossary

After specifying the settings for TCP/IPv4, follow the procedure in “Settings Common to TCP/IPv4 and TCP/IPv6”.
